Petticoat Lore Lacks Power with "Frills"

IT HAS been quite a long time since we had a chance to speak our thoughts and in the meanwhile feminine scraps have piled up in an alarming heap. We are afraid if we express ourselves, that the fellow who sees through the "Spectator Specks" will brand us as "free thinkers." However, when a balloon keeps on filling up with gas and it has no outlet, it eventually bursts. To avoid the fate of the balloon we are forced to speak.

Did you ever start down the hall with your best girl friend in safe tow for a class, and just when you thought you'd got her there a masculine form emerged from the shadows and confronted her with a "May I speak to you a minute, please?" Of course you have, and sailed on trying to look indifferent and unconcerned, and pretty soon she joined you trying to look the same way. Well, the upshot of the whole matter was, if she didn't "string" him, she had a Date. We spell it with a capital because that's the way a good many girls seem to regard it.

A date is the name of a nice, sweet, dry fruit sold in boxes at the grocery store; a date is a name for 1492, when Columbus discovered America by following the direction of the compass; but a Date, to some of M. C.'s girls, is a valid and legal compact, —inviolable and unbreakable, between "my man" and myself. It doesn't make any difference to her that she has a previous engagement with a girl friend, or that she's having her funeral preached over at the

As It Seems To Me Free Speech

When our government was first forming, seditious laws were passed which prohibited folks from saying what they thought. One man, who was dissatisfied, made the statement that he wished that the wad of a cannon, fired as a salute to president, had struck him in the rear bulge of his breeches. Today this doesn't seem anything very bad but he was fined and imprisoned. Now, we are supposed to have free speech which is something that must take place if constructive criticism is going to thrive.

An attitude of many folks is to keep all radical thinkers' ideas away from the younger folks because it may make them radical also. This type of proceeding is very precarious because you can not keep these ideas from them always and when they do hear these ideas they are given a harder job than if the proper folks would have discussed these ideas with them when they were younger. We are supposed to be a people of free speech. It is a good plan to let everyone air his views. But for some views airing is not enough; fumigation would probably be better.

This is particularly true of some college students. If a student is pessimistic all of the time his point of view is in sore need of fumigation. Thus he can not poison all of the rest of his fellow students.

The student that puts all of his eggs in one basket so to speak and says for instance that science can explain everything is too narrow to

synnasium where basketball is being practiced, or that she's needed at a committee meeting; let the stars drop out and the moon turn to blood, quite she, all things must fall before Dates.

We must remember also, that some girls don't have Dates, they have a Date—something of a long perennial evergreen Date that buds in September and drops its leaves in June when "two hearts that beat as one" are forced to tear themselves apart and return to the paternal home of their ancestors. This special kind of a date takes a stroll before breakfast, participates in the after dinner parade down Euclid, sits together in chapel, and when you are trying to come from the library in no time at all—well, there's that date meandering along in front of you. It makes you feel like saying, "For Pete's sake, get out of the way and let somebody walk who can, or else get married and get over this sentimental foolishness."

Well, all this harangue does not mean that we don't like boys. We do, and we just could not get along without them, but girls, don't forget that you'd be in a terrible predicament in a world of boys with no girl to lend you a powder-puff or fix your ear-bob where the ear shows through. We need girls. Every girl misses an untold lot of pleasure if she doesn't have a real girl chum; and this is not possible if she intends to "dump" her every time a boy hoves in sight. Let's not worry about the kind of girls boys like, let's be the girls that girls like. It pays.

even see that science and religion can go hand in hand and supplement each other. This narrow attitude also could stand fumigation.

Let's not be afraid to let every person speak his own mind. If it doesn't coincide with yours, weigh his ideas and see where they are strong and when weak. You know his strong points may be able to supplement your weak ones. At least there is an excellent possibility of this. In other words no sane man's ideas should be stifled. Why not give them a chance? —An Interested Observer.

"You and I"—March 11

Spec-Yu-La-Shuns

As has been said many times, this column is not a copyrighted column and anyone can contribute to it, provided it can pass the censorship of the editor. If you have anything newsworthy that should be told, we suggest that you write it out and put it in the Spec box in the business office.

And another thing that is bothering us. We always considered The Spectator the newspaper for the students and faculty. In the past all of the news about the faculty members has been censored. We contend that faculty members should not be deprived the possibility of publicity. But the faculty sponsor says "ixnay." Maybe she is afraid we might spill too much about her. That is what you would call a guilty conscience. Nevertheless the next two or three

subjects concern faculty members and if there isn't anything about them you will know that it was censored.

For once we hear that a woman did not have the last word. It seems that the other day our Dean of Women tried to go through a street where men were working. The tragic part of it was that there was a sign back at the corner that said the street was closed to traffic. Her arguments went for naught as the foreman told her that she should learn to read signs.

We have been wondering when a certain Prof. is going to wash his car. We are almost certain it has not been washed since school started. If it isn't washed soon, he might not remember what color it is.

From latest reports we learn that the motorcycle cop followed some of the cars out of town last Tue. night. It is even rumored that Dr. Foley tried to pass the cop only his second thought told him not to.

Speaking of Tue. nite. Did you hear about Naylor and Yount? They entertained a female visitor in their room that nite. They explained the fact that the "person" was just a friend of theirs, namely Mrs. Nanny Goat. She appeared very attractively enveloped in the voluminous folds of Mr. Yount's bathrobe.

Again Boyer breaks into the headlines. He has at last consented to give the ladies a break again. The latest report says he has his eye on a certain junior. Guess who?

Safety first is a good motto. To Dorothy Dell this is not good enough; so she has the motto of Super Safety First. She even demonstrated it the other day when she was visiting a high school. She politely turns in the fire alarm and then wonders if there is a fire or not. Anyway she contends that all of the kids were safely out of the building if there had been a fire.

From far off down town comes this spectacular story. Our student soda jerk at the Mary Ann was looking for a sky hook to get a piece of paper out of an overhead light. After searching the place over for the sky hook with no avail, she set out to borrow one from some other place of business. After visiting a machine shop and a couple of restaurants someone finally put her wise that a sky hook just does not exist. Was she burnt up or not? Just ask her!

From such evidence as bulletin board notices and personal duns we gather that class treasurers are having a tough time of it. To the junior class financier we must give credit for showing no favoritism. We hear that he sent himself one of the duns. How about it, Weaver, did it bring results?

And what can you say for yourself on this score? In a recent game of Monopoly, "Dee", admitted having paid Weaver \$100 for keeping his mouth shut. Let's promptly raised the query, "Would \$100 be enough to do that?"

"Spin" of Light is Measured by Science

Dr. R. A. Beth Announces Proof of Existing Theory in Report

Successful measurement of the "spin" of light, the twisting force which its rays exert on anything solid, was announced recently in a report to the American Association for the Advancement of Science by Dr. Richard A. Beth of the Worcester Polytechnic Institute.

The spin of light, or its angular momentum, was described as the propensity of each particle, or proton, of light to spin like a speeding rifle bullet.

This spin had been only theory until Dr. Beth found a method of proving its existence and measuring it by training a beam of light on a circular quartz plate one inch in diameter and about three thousandths of an inch thick.

The light came from a tungsten filament glowing at temperatures ranging from 4,500 to 5,000 degrees Fahrenheit. The quartz plate hung in a vacuum and the light before striking the plate was polarized by passing it through a prism.

"The experiment," Dr. Beth says in his report, "proves that light can be made to exert a twisting force on a material object. In other words, light or radiation can be made to carry an angular momentum through empty space which may be transferred to matter."

"The angular momentum is observed as a twisting force or torque on the disc by suspending the disc from a very fine quartz fiber about a foot long. The torque measured was about one ten-quadrillionth of a pound-foot. A pound-foot is the twisting force represented by a force of one pound acting at the circumference of a wheel one foot in diameter."

"The torque is found to be just that which may be calculated from Maxwell's electromagnetic theory of light. Calculation of the basis of the quantum theory gives the same result in this case."

"The value of the experiment lies in the further verification it affords the modern theory of light and because modern technique has made it possible to detect an effect which was considered entirely beyond human observation only a few decades ago."

Of course, I acted real nonchalant about it all, but really I'm kind of flustered—I mean about writing for the paper and all and I told the editor that what with Weaver and all those smart people pouring off those just too thrilling big words and writing about important things and all, why I didn't see what I could add to theirs, but he says that the readers want to see the other side, and hear fresh views and so on etc. etc. but I told him that I always agree with what Weaver says because I don't know what he's talking about and wouldn't want to argue with him anyhow. . . . If it takes five cats five minutes to catch five mice, how many cats does it take to catch 100 mice in 100 minutes? . . . Think hard; I guessed it myself right away. . . . Of course I'm not hinting at anything, but I am wondering about some of these teachers when they were young. I bet they had some dry classes too. It's said that our dear President was telling about one of his classes when he was a student and that "at the end of the century the teacher said . . ." Them's my sentiments exactly . . . usually. . . . When louder clothes are made, that little black-haired freshman will wear them. But then, I've always said that clothes often fake the man. . . . The answer to above puzzle is five cats, but they can't fool me; I still say it's a hundred. . . . I wish I'd saved my old Princess Eugenie hat; Dr. Bright says they'll be back in style again in about three more years. . . . But that's only one of my troubles; some one is always trying to take the boy out of my life. . . . I hope the Spec employs a good copy reader; I do so want my first copy printed just right so that my public will get the most out of it.

Local Anti-Tobacco Oratorical Contest to be Held March 10

The local anti-tobacco oratorical contest will be held next Tuesday, March 10 at 3:30 p. m. in the chapel. The contestants are Lucille Ullery, Alvin Lindgren, and Paul Miller. The winner of this contest will represent McPherson College in the state contest at Miltonvale on March 20. Students are invited to attend the try-out.

Student Self-Support Considered in Book

"Make Yourself a Job" is Title of Hockenbury's Recent Book

"Students must understand the problems involved in self-support and how to overcome them. Student unemployment has become of age," declares Myron Downey Hockenbury in his recently published book "Make Yourself a Job."

He points out in his introduction that the purpose of this book was not to direct the worker in the only way to carry out his job but to help his mind to studying the opportunities and problems involved. In discussing how to meet the cost of college education he stresses, "The student who is to work his way through college must have seven requisite qualities: health, intelligence, personality, dependability, some experience, capacity for work, and initiative."

Myron Hockenbury also delves into scholarships and loans, the room and board problem. He gives an inspirational and instructive discussion to "Salesmanship," which is of tremendous value to everyone. This book explains how skilled and unskilled labor can be put to an advantage. An excellent discourse is given to clerical work, agricultural pursuits, journalistic field, athletic views, and vocational opportunities.

Unfortunately few people will probably be persuaded by this brief summary to turn to the pages of "Make Yourself a Job." But it is well for thoughtful, forward-looking students to consider this excellent instructive and entertaining book that will indeed help solve the problem of unemployment which is the problem of every student.

COLLEGE DAZE . . .

(From "Gourdie" Green's Diary)

Thurs. 27. Larned mornen I have in the last two weeks, at the tractor show in Wichita today. Saw so many kinds of machinery I wish I was out on the farm using it. Boy they had everything a fellow ought to have, only if he had enough money to buy all the stuff he needs to farm right I don't see what he would want to farm for. But it sure would be fun to get out and ride that tractor with the radio. I wonder if any of these college gals have a drive to live on a farm? Guess I'll have to do some experimental psychology. I can't work like Boyer does, though, he sends notes in the Specks he mails out to girls. That's using the mails to defraud.

Fri. 28. Sure nice and warm today, makes me think of the old swimming hole. We skinned the Baker wildcats, but it wasn't much fun doing it cos I couldn't get my breath. First football game I ever saw on a wood floor, must of been a prize fight referee. That ties us up for the lead and somebody felt so good they clumb up and give Jerzybell a good wringing. He must of been scared cos he sure didn't take much time between oaths, guess he thought Forney might ketch us.

Sat. 29. Forney made me work today just the same as if he didn't know it was a special day which don't happen only once in four years.

Sun., Mar. 1. Too swell a morning to get up early, was late to SS and slipped in to hear what Dr. Schwalm was saying, which was good. I liked CE tonight, that was swell about the President doing all that, only shucks! I got to read that book now. Took quite a walk this afternoon, saw two robins so spring must be here.

Mon. 2. March came in lyn down, maybe she'll go out with a jam. Changed tables today, and I'm mad cos they never do put me at the table with the girl I want to be with.

Tues. 3. POOEY! Wesleyan beat us tonight by one point. I sure wanted to go bad, but I guess the Powers that Be was wise in keeping me here at my labors. Maybe we can do better to C of E. Naylor fetched a goat up from somewhere and turned it loose before he left for Salina. After it thought it over awhile about whether to go in the girl's dorm somewhere, it finally left in a hurry. We didn't see any more of it till Naylor come home and it was in his room. I guess it thought he could show it the way home. It sure looked ritzy with Pewee's bathrobe on. We better put an amendment in the new constitution about when there is a

goat in somebody's room who'll be the goat.

Wed. 4.

I sat and thought for one long hour. In silence meditated—I'd like to know why every girl I want to date is dated.

But lo! What's that, beside the cave? My mind the problem grapples. Well, bless my soul! I do believe it's Forney sorting apples!

This one, Ugh! Lay it back! "Tenderly, tenderly, tenderly now—Carefully, carefully, carefully now—Wipe that soft spot on the sack!"

And as he counts them one by one. Discarding what's demolished. I wonder what would be the way To swipe the ones he's polished.

I wonder—There! He goes below: The time is ripe for someone! But no! He's caught him in the act. And Vasquez takes a bum one!

And such is life: this lesson runs Through all I have forgotten: The big shots hold the good ones back And make you take the rotten.

Past Week Sees Large Increase In Number of New Library Books

McPherson College's Carnegie library has added a number of new books during the past week. Of great interest, also, is a group of pamphlets on careers and their future.

The new books are as follows: Moses, M. J., "Dramas of Modernism and Their Forerunners"; Rusk, Wm. S., "Methods of Teaching the Fine Arts"; Hardy, Bernice, "Mono Dramas"; Cordell, R. A., "Representative Modern Plays"; Calkins, E. E., "Care and Feeding of Hobby Hobbies"; Cleveland, E., "Training the Toddler"; Burnham, H. A., "The Boy and His Dolly"; Jones, E. and R. Ford, "Life"; France, H., "Lys Route."

The new pamphlets on careers are published by the Institute for Research of Chicago. They are as follows: "Beauty Shop Management"; "Women's Apparel Shop"; "Book Store Operation"; "Air Conditioning"; "Commercial and Trade Association Secretaryship"; "Private and Social Secretaryship"; "Florist Industry"; "Construction Contracting"; "Garage Management"; "Farm Management"; "Diesel Engine"; "Petroleum Industry"; "Government Service"; and "Radio."

IN OTHER SCHOOLS

Miss Elsa Aasen, soprano, star of the Metropolitan Opera Company, has been signed to appear in concert here Easter Sunday afternoon, according to an announcement by the college management late last week. The recital will be a feature of Lindsborg's annual Messiah Festival.—The Bethany Messenger, Lindsborg.

Men are what women marry. They have no choice—that is all that was given them to marry. Making a husband out of a man is the highest plastic art known to civilization. It requires science, sculpture, common sense, faith, hope and charity. If you permit a man to make love to you, he gets tired in the end and if you don't he gets tired in the beginning.—The Round Up, North Platte, Nebr.

Dan West, Brethren young people's leader, who was on the campus last week for the conference, held two meetings for the Manchesterites to attend. Mr. West is a peace leader of a national reputation, being engaged at present on work for the National Emergency Peace Committee.—Oak Leaves, North Manchester, Indiana.

Illustrating his talk with motion pictures that graphically portrayed the adventures and hardships of his second antarctic expedition, Rear Admiral Richard E. Byrd last week told an unadorned, straightforward, yet intensely interesting story of his experience at the "bottom of the world."—University Daily Kansan, Lawrence.

Mr. and Mrs. "Cheesy" Voran, Miss Brown and Miss Lingenfelter attended the Music Convention which was held in Topeka on Thursday and Friday of last week.

Personal

Professor Mohler gave a talk at the Methodist Church in McPherson Sunday.

Richard Mohler, son of Dean R. E. Mohler, received his Eagle badge from the Boy Scouts in Wichita last week. Richard was the youngest boy to receive the badge in the Wichita area. He lacked one month of not going through in the minimum time.

Professor Mohler lectured at a joint teachers meeting of Ford and Clark counties Saturday, Feb. 22. The meeting was held at Minneola.

Professor Mohler and Superintendent Potwin attended the National Education Association at St. John Monday, Feb. 24. This was a meeting for the department of superintendents. The regular N. E. A. meets during the summer. Many world scholars and educators were present and gave speeches. Fourteen thousand people were present at this meeting. Professor Mohler returned Friday afternoon.

Professor Dell and Mrs. Dell visited Mr. and Mrs. Harry Frantz at their home at Assaria Sunday. Mr. and Mrs. Harry Frantz were former students here and Mr. Frantz now teaches at Assaria.

Mr. and Mrs. R. M. Brady spent several days on the campus last week visiting Mrs. Emmert. Mr. Brady is the pastor of the Brethren church at Ottawa.

Glen Turner, former student here, visited on the campus during last week end and the first of this week.

Mr. and Mrs. Leland Lindell and Miss Esther Brown, all former students here, visited Mrs. Emmert Sunday.

On Monday, March 2, Professor Alvin C. Voran, baritone soloist, and Miss Fern Lingenfelter, pianist, were guest artists for the Freble Cief club of Newton, Kansas. The recital was given at the First Presbyterian church of Newton.

Mary Trostle spent the week end at her home at Nickerson.

A group of people from the College motored to Wichita on Monday, March 2, to hear Joseph Hoffman. The group consisted of Miss Brown, Una Morine, Bernadine Ohmart, Viola Harris and Glen Turner.

Mr. and Mrs. Ernest Watkins were here for the Baker game Friday night and remained here until Sunday. Mr. Watkins is Verna Watkins' brother and Mrs. Watkins is Jean Alleg's sister.

Mass. School Gives Unique Scholarship

Offers Opportunity to Women of Character and Leadership

A new group of scholarships which will provide young women having character, mental keenness and qualities of leadership with an opportunity to develop their potentialities as scholars and citizens, this week was announced by Wellesley College, Wellesley, Mass.

President Ellen Fitz Pendleton announced that the awards will be known as National Prize Scholarships, and will be offered each year to students in a different group of schools in cities to be designated by the trustees of the college.

For 1936-37 there will be ten scholarships of \$500 each, to cover tuition charges, which will be awarded to students in private schools.

Two of the scholarships will go to students at school in New York City. One award will be made to a student in each of the following cities: Philadelphia, Washington, D. C., Detroit, Chicago, St. Louis, Minneapolis or St. Paul, Denver, and San Francisco or Los Angeles.

The grants will be made for the freshman year, but may be continued for another year and for the entire college course if the student's standing and attitude warrant. On the other hand, any recipient who does not need the full prize may release any part of it to the college for the use of other students.

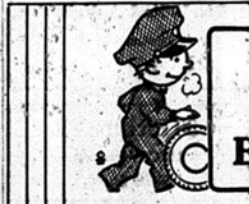

These scholarships will supplement grants which the college now makes to needy students. Each year six competitive regional scholarships are awarded on the basis of the entrance examination records of students who need financial assistance. Besides these awards, the trustees set aside a substantial sum for undergraduates and graduates who cannot meet the charges for residence and tuition.

Last year scholarship amounting to \$133,656.25 were distributed among 338 undergraduates and forty-eight graduate students. Of this amount \$49,914 represents the allowance granted to 170 students living in cooperative houses.

Sophs and Freshies Chase Down White Mice, Gold Fish

The freshmen and sophomores reported that they had a hilariously good time at their Sunday school party Saturday night.

Various games were played among which was a general hand-shake by which all became acquainted with each other once again. The main event of the evening was a "scavenger hunt." The group was divided into four groups each of which was given a list of articles to find. The church then became a sort of trash dump of what ever could be found. Some of the things brought to the church included two live white mice, a pair of Tony's No. 12 shoes, a long white horse hair, kiddy car, white hen, gold fish, black cat, McPherson College calendar, and other mixtures and varieties of the spice and sap of life. Other games played were musical chair and the Prince of Paris has lost his hat.

To close the party refreshments of fruit jello with whipped cream, and vanilla and chocolate wafers were served. Sponsors of the group present were Reverend and Mrs. Zook, Mrs. Schwalm, and Doctor Brown.

Chem Teacher Saves Boy from Burns

Henry P. Sullivan, Peabody, Mass. high school chemistry teacher, was acclaimed a hero when he saved 18-year-old George Zolotas, high school senior, from serious burns after a laboratory explosion which sent forty frightened students scurrying to the street.

Zolotas' sweater burst into flames and acid was eating his trousers when Sullivan ripped his clothing from him. The explosion was caused by Zolotas, who poured water into a can of sodium.—(College News Service)

Baker Encounters Conference Defeat

M. C. Hands Baker a 30 to 24 Defeat—Wildcats Lead at Half by Two Points.

The McPherson Bulldogs defeated the Baker Wildcats by a score of 30 to 24 last Friday night, which gave the two teams a tie for the lead in the conference. McPherson held the small end of a 13 to 15 score at the half and then rallied in the last period to come from behind and hand the Baker team their second conference defeat of the season.

This was a rather rough game but both teams displayed a good grade of basketball. As the score indicates the Bulldogs played a good brand of basketball the second half while the Wildcats played their best ball the first half of the game.

The Liston team took an early lead which was not overtaken until about five minutes of the second half had passed when the Bulldogs overtook the Wildcats by making the count 16 to 15. It was not long until the score was 19 to 16 in favor of the Baker crew. The Binford team soon overtook the Wildcats for the second time and their lead was not overtaken for the remainder of the game.

In glancing at the box score of the game we find that the high scorers for the game were both guards. Johnston, McPherson guard, and Albertson, Baker guard, both tallied eight points to be high point men of the game. Johnston made all of his from the field while Albertson made two from the field and four charity tosses. Meyer, McPherson center, ran a close second to these two men with seven points.

The box score:

	G	FT	P
Baker	2	0	3
Belsler f	2	0	2
Quar f	1	3	1
Heine c	1	1	1
Schrey g	1	1	1
Albertson g	2	4	2
Rudolph c	0	0	0
Porter f	0	0	1

	G	FT	P
McPherson	8	8	10
Hau f	1	0	1
Haggood f	2	0	2
Meyer c	3	1	2
Johnston g	4	4	0
Barngrover g	1	2	4
Crabb f	1	3	2
Flowers g	0	0	2

Referee: Carlson—Bethany.

SPORT LIGHTS

By Conway Yount

Even though the Wildcats had a tough game Friday night they pulled through Saturday night to hand C. of E. a 50 to 35 defeat. When the Baker team went into this game they seemed to have all the odds against them. They had played a hard game the night before, they were playing on a foreign court, and the College of Emporia had an improved ball team on the floor. But the Wildcats pulled through.

The McPherson College basketball squad has surely come up to the front here lately. The Bulldogs now have an excellent chance to tie for the conference championship after the Bulldog got ahold of the Wildcat's tail last Friday night and twisted it off.

The McPherson College intra-mural-all-stars won the third place cup at the Buhler invitation tournament last week end. The team won their game on Thursday night from one of the strong teams of the tournament and Friday night they lost to the winners of the tournament while on Saturday night they won to receive third place in the tournament.

The Church of the Brethren Sunday School Junior basketball team won second place in the league at the Y by winning 4 out of 6 of their games which they played there. The Senior team is in first place in another league at the Y at the present time.

Forty-Four Years' Trial Proves Popularity of Basketball

Most of us, that is those who are interested enough to read this article, have grown up with a basketball. As a boy develops in his playing, so has the game developed. We can all remember of using a cap or a little ball, throwing it at a hoop or bucket hung up on a telegraph pole or on the side of somebody's barn. There was generally a lot of wild scrambling and occasionally a little formation of cliques for mutual advantages—the beginning of team play.

Later we rose to the dignity of the local gymnasium or perhaps to an outdoor court. In the course of time, we were elevated to a regular team with suits. To get a game away from home with full expenses and a meal was considered rare good fortune. Many a father resented the emphasizing of the fact that you were also to get a "meal" for playing. When we would go to a foreign court we would sometimes find it larger and sometimes smaller than the court which we had usually played on.

But times have changed. We now see huge basketball pavilions. After numerous inter-sectional games, we feel the rules are becoming more universal; the provincial ideas are almost eliminated. Our officiating is approaching a new normalcy. While tooting on the part of the officials is being minimized. As a result, the spectators are becoming more interested, and the players concentrate to a greater degree.

It is estimated that at present there are eighteen million people playing basketball in different countries of the world. Truly the game must be right to attract the interest of so many people in such a short time with the originator still very much alive and still actively interested in the development of the game.

Dr. James Naismith originated the game at the Springfield Y. M. C. A. Training School in 1892. Its growth since that time has been remarkable. That the inventor should live to see the great development on the original basis is fine; but to think that he is still ahead of most of us in his thinking about the game is still finer. In his words there are four outstanding principles involved in originating the game.

J. That it should be an interest-

ing game with a ball that could be handled but not hidden by the hands.

- That it should be an easy game to learn, so that anybody could play.
- That it should be so skillful as to require considerable indulgence and even then be a little shy of perfection.
- That it should lack the roughness of football and be played indoors. In this connection, there personal contact is forbidden, there are continuously intellectual and physical contests between players in trying to outsmart each other. Another factor in eliminating roughness was in making the basket horizontal rather than perpendicular, thus requiring added skill in arching accuracy rather than direct force.

Sophomore A Heads Intra-Mural with Five Victories

As the intra-mural games have progressed we find that the Sophomore A team is still at the head of the list, having won five games out of five starts. In second place we find the Freshman B team which has won four and lost only one. The one game which they lost was to the Sophomore A. The Seniors are in third place with two victories and one defeat. The Juniors are in fourth place.

In glancing at the scores to the games thus far we find the best scoring team in the league has been the Freshman B team which made 63 points in one game, while at the same time the Freshman A are the lowest scoring team in that during a game they tallied 14 points.

We find that the team at the head of the list is headed by Mohler with Wagener, Boyer, Nettleton, Brower, Zook, Haldeman, and Lucky as the remainder of his team. The second place team is composed of Captain Yoder, with Larson, Bredfeldt, Kingsley, Yount, and Letkeiman.

The standings:

	W	L	Pct.
Sophomore A	5	0	1.000
Freshman B	4	1	.800
Seniors	2	1	.666
Juniors	2	2	.500
What-Not	1	1	.250
Sophomore B	1	3	.250
Freshman A	0	5	.000

Intra-Mural All-Stars Take Third in Invitation Tourney

A basketball team composed of three second team men and several intra-mural players entered the invitation tournament at Buhler last week and came home with a third place trophy. This team was under the management of Sam Stoner.

In their first round game last Thursday night they won from what was picked to be one of the best teams in the tournament. This team was a very tall, lanky team from Castleton. On Friday night the Bulldog reserves lost to the fast team which was entered from Newton. This team won the tournament. In the consolation game which the team played in Saturday night the McPherson team won by one point. As a result of winning third place they were awarded a fine looking trophy.

Industrial Arts Class Will See Film on Metal Industry

A film on "Sheet Steel and Tin Plate" will be shown in the industrial arts recitation room Tuesday morning at 11 o'clock. This is the last of a series of films that Professor Dell has provided for the students of his department, as well as for all other students who have cared to attend.

These films are secured through the U. S. Department of the Interior from the Bureau of Mines. The films have to do with various phases of the industrial world. They provide valuable information concerning the conditions under which industrial workers have to work and the process through which many raw materials must go before they reach us as a finished product.

Films that have been shown are: "Abrabras," "Story of Copper Mining," "Mountain to Cement Sack," "Nickel," "Fabrication of Copper," "Steel—Mining—Pig Iron—Steel Ingots," "Rails, Plates, and Hot Rolled Products," "Wire Products" and "Pipe."
